SHIVAM ROHILLA

shivamrohillaj26@gmail.com — linkedin.com/in/shivam-rohilla-5b1369137 — +91-9643641064 — Bengaluru, Karnataka, India

PROFESSIONAL SUMMARY

Senior Software Engineer with 5+ years of experience building scalable, performance-optimized Angular applications. Strong expertise in Angular, TypeScript, RxJS, and NgRx with a focus on clean architecture, bundle optimization, and responsive UIs.

TECHNICAL SKILLS

Frontend: Angular, AngularJS, TypeScript, JavaScript, RxJS, NgRx, HTML5, CSS3, SCSS, Angular Material, PrimeNG, Bootstrap, Chart.js, Storybook
Tools & DevOps: Git, GitHub, Azure DevOps, Nx Monorepo, Webpack, Jest, Karma, Jira, CI/CD
Backend & Database: Java, Spring Boot, SQL, PostgreSQL, RESTful APIs, Microservices

PROFESSIONAL EXPERIENCE

Netradyne Technology India PVT LTD **Bengaluru, Karnataka**
Senior Software Engineer *July 2025 – Present*

- Spearheading migration of legacy AngularJS IDMS dashboard to **Angular 19**, converting major modules and **20+ views** migrated so far while architecting scalable patterns for remaining modules — zero downtime for 500K+ active devices
- Improved page load on a heavy device-listing view from **8s to under 2s**, by implementing **virtual scrolling**, on-demand data fetching, and trackBy optimizations — enabling smooth rendering of 10,000+ device records without browser lag
- Shipped immutable notification preferences with **zero UI regression**, by architecting a **data transformation layer** that normalized legacy and feature-flagged API responses into a single structure — enabling gradual customer rollout behind feature flags
- Replaced an entirely **on-call manual RMA workflow** with a **self-service portal**, enabling customers to initiate returns and track real-time status (Initiated → Label Sent → Shipped → Received) — reducing support call volume
- Received **direct customer praise** by building **Subscription & Hardware Insights** feature that unified previously fragmented flows scattered across multiple pages into a single cohesive module — enabling fleet managers to manage subscriptions, assign accessories, and track devices in one place
- Contributing to **Netradyne Design System** by building reusable Angular components on **Storybook** with interactive documentation, improving UI consistency and accelerating team development
- Boosted development velocity by **40%**, by leveraging **AI-powered tools** (Cursor AI, Claude) for code generation, refactoring, and rapid prototyping across feature workflows

Tata Consultancy Services (TCS) **Noida, Uttar Pradesh**
System Engineer (Frontend Developer) *August 2021 – July 2025*

Key Projects & Achievements:

- **Broker Portal:** Digitized a fully manual customer onboarding process and received **positive broker feedback**, by architecting a portal in Angular 17 with complex reactive forms, RBAC, and auto-logout — reduced turnaround time by **30%** with **90%+ code coverage** via Jest
- **Employee Portal:** Decreased page response times by **20%** (Lighthouse audits), by leading a complete UI rebranding and implementing optimized **NgRx state management** with memoized selectors across timesheets, payroll, and reimbursement modules
- **Recruitment Portal:** Improved shift-scheduling efficiency by **40%** across **3 regions** (APAC, UK, US) serving 200+ partner companies, by integrating third-party calendar APIs that replaced manual coordination between companies and temporary workers
- Improved frontend performance across all 3 projects — cut bundle size by **20%** via **lazy loading, tree-shaking, and route-level code splitting**, and reduced initial load times measured through Webpack bundle analyzer
- Reduced new-hire ramp-up from **4 weeks to 2 weeks**, by mentoring 3 junior developers through structured code reviews, pair programming, and building an internal Angular best-practices knowledge base

EDUCATION

Bachelor of Technology in Computer Science 2017 – 2021
Inderprastha Engineering College, Uttar Pradesh, India
